INFORMATION DISCLOSURE STATEMENT

Mail Stop Amendment
Commissioner for Patents
PO Box 1450
Alexandria, VA 22313-1450

Honorable Sir:

This Information Disclosure Statement is submitted in compliance with 37 C.F.R. §§ 1.56 and 1.97 through 1.98.

Applicant hereby encloses a check in the amount of \$180.00 for the fee set forth in 37 CFR 1.17(p) for submission of an Information Disclosure Statement under 37 CFR 1.97(c).

Record is attached of published art for consideration during prosecution of the above-

identified patent application. No representation is made or intended that a search has been made or, if made, was complete, or that no more pertinent art than that listed is available. It is expected that the Patent and Trademark Office will conduct an independent search for relevant prior art.

Unless otherwise indicated, or unless references cited are U.S. patents or patent application publications, a full text copy of the entire reference of published art is attached. Where specifically indicated, an equivalent English language patent or publication is attached in lieu of the translation.

In accordance with the Patent and Trademark Office Notice of August 15, 1980, also enclosed is a completed Form PTO-A820 (Form PTO-1449).

Also, according to 1.98(a)(3)(i), a concise explanation is listed below, as it is presently understood, of each foreign patent document not in the English language.

Please consider the following published art:

German Utility Model Patent No. DE29821694 U1, filed on December 5, 1998, discloses a microscope with a power supply which provides various voltages for microscope attachments. The various voltages are provided by a coupling system to an illumination device for transmissive or reflective illumination. An electric cable is used to establish a connection from the power supply to the illumination device.

The electric cable comprises three conductors, wherein two of them are used to transfer power from the power supply to the illumination device. The third conductor is used for shielding of the other ones and is connected to the ground potential. This ensures that a high frequent drop in does not infiltrate the cable or cannot be radiated from the cable.

In most cases the power supply is integrated in the microscope, wherein the connection from the power supply to the microscope is carried out within the microscope housing. For the connection from the power supply to the external illumination device the cable is provided with a connector which fits into a plug of the power supply.

Respectfully submitted,

A handwritten signature in black ink, appearing to read 'S. Peter Konzel', written in a cursive style.
